Semi Portable Refill Station
Temporary XS-RS-03-TM

INFORMATION BOOKLET

Meet the world's smartest water station

WELCOME

We began meetpat to change the way people think about public water stations, and in doing so we believe we can drive change for generations to come.

meetpat acknowledge and pay respects to Wiradjuri peoples, Elders and Country whose land we operate our business. We also acknowledge that Aboriginal and Torres Strait Islander peoples hold extensive knowledge about connections to water, which has been practiced for thousands of generations.

Congratulations on purchasing a world class, smart water station.

Fundamentally, we care about delivering safe, clean water and ensuring positive public adoption of water stations. We design and manufacture products with the safety of you, the user, foremost in mind. In addition, we ask that you exercise a degree of care when using any meetpat product.

Please follow this information booklet to effectively install your product.

All recommendations within this document should be used as a guide only. Users and installers should seek suitable assistance to ensure products comply with all standards and are safe for use. meetpat are constantly evolving and updating products to ensure that they are designed and manufactured to the highest possible standard. Manufacturing and product parts are subject to change without notice. Please ensure you follow the supplied current guidelines when installing and servicing your product.

DISCLAIMER & SAFETY

Adhere to the risks/cautions outlined by meetpat, along with the regulations outlined by the local governing body.

RISK/CAUTION	DISCLAIMER	CHECK
Structural Integrity of Mounting Surface	meetpat takes no responsibility for the structural integrity of the mounting surface chosen and recommends consultation with an engineer or other suitable parties prior to mounting.	
Water Supply Line Temperature	Minimum operating temperature is 1 Degree Celsius. Maximum operation temperature is 38 Degrees Celsius. Outside of this temperature range may cause operational issues and damage to the unit. This will also void warranty for parts.	
External Surface Temperature/Location	meetpat products are suitable for a large range of outdoor locations (including direct sun), however certain set up locations will optimize user experience. Consideration should be given to the best placement of the unit. If exposed to direct sun in extreme temperature environments for extended periods of time, water and surface temperatures may become high enough to cause a potential risk to users. Meetpat provides thermal protection on the pipework of all units.	
Supply Line Pressure	Maximum working pressure is 500kpa Minimum working pressure is 120kpa Pressures outside of this range may result in operational issues/and or damage to the unit. Supply line pressure outside of this range will void warranty.	
Potability	Check source water quality prior to installation. Please note that this system is intended for use with clean and safe potable drinking water only. It is important that the water is microbiologically safe and of known quality before using the system. Do not use with water that may be contaminated or of unknown quality without proper disinfection.	
Accessibility	meetpat takes no responsibility for the suitability of any set up location, clearance for traffic, pedestrians or other clearance requirements. meetpat recommends that the chosen location(s) are reviewed for compliance with OH&S, local regulations and guidelines, to ensure compliance. Refer page 12.	
Infrared Sensor	Touch free sensor has limitations activating on some surface materials and finishes. May include but not limited to; matt black, glass and highly reflective materials.	
Weather Conditions	Do not set up in high wind areas. If the hoses pass over traffic areas, use approved hose trip covers. Do not set up units in subzero temperatures.	
Maintenance	Regular maintenance and cleaning will avoid premature degrading of the product. Failure to fit parts, set up and pack down water unit correctly or conduct preventive maintenance, may result in voiding the product warranty. E.g. continuously running tap may cause rapid degradation of drainage areas and is not a product material fault.	
Electrical Wires	⚡ Do not set up the water stations near live exposed electrical connections or wires.	

Ensure all personal protective equipment is used.
Do not use power tools or installation equipment in an unsafe manner.
After installation, keep these instructions for future reference.

Wear PPE suitable for the installation type	    Ear Protection Eye Protection Appropriate Footwear Cut Resistant Gloves
Use Correct Tools	 Always use the correct tools which are in good working condition, during the installation and maintenance of any product. Proper use of tools is your responsibility.
Moving Parts	 Water stations are made up of moving and sliding parts. Ensure to keep all body parts, loose clothing and cables away from these areas.

Make sure you are fully prepared before getting started!

Read through all of these instructions and safety precautions before beginning the installation or any service. Following these steps will help keep everyone safe and injury-free.

Product Overview | Set Up

Semi-Portable Temporary XS-RS-03-TM

This water station is manufactured using stainless steel and powdercoated aluminium. With a lead free plumbing system and anti-bacterial bottle refill dispenser. This water station comes with a heavy duty base and a pair of non slip HDPE ramps.

TURN ON SOLAR LIGHTING | READY FOR USE

Water stations are fitted with a solar lighting module, which should be turned on and checked during the initial set up process.

1 **Locate and detach** the solar lighting module

I look like this.

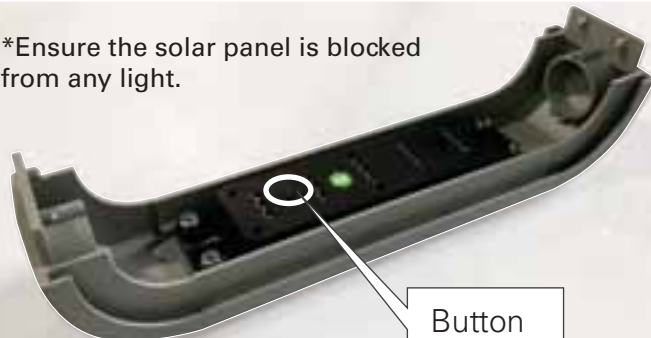

Solar Panel

! THIS SYSTEM IS FITTED WITH AN AUTOMATIC LOW LIGHT SENSOR
IT WILL ONLY ILLUMINATE DURING LOW LIGHT (NIGHT TIME) OR WHEN THE SOLAR PANEL IS FULLY COVERED.

2 Flip the module upside-down and place on soft/scratch free surface*

*Ensure the solar panel is blocked from any light.

Button

3 **Locate Button**
Press button to cycle through modes to the preferred setting.

-  **1 - Dim**
-  **2 - Full**
-  **3 - Off**

NOTE
SOLARTOPS ARE SUPPLIED SWITCHED OFF

4 **ENSURE SOLAR LIGHTING MODULE IS NOW TURNED ON (LIGHTS ON)**

! TEST - LIFT UP TOP ASSEMBLY
The lights should turn off when the Solar Panel is uncovered. (Unless you are operating in low light (night time).)

FINISHED
MOVE TO INSTALLING THE TALL EXTENSION KIT OR FITTING YOUR PANELS

! LIGHTING NOT WORKING?
TRY CHARGING THE SOLAR PANEL.
Place in direct sunlight for 2 hours and retry.
Placement undercover, seasonal changes (summer/winter) may effect the ability to fully charge the lighting module with sufficient light.

Tall Extension Kit

meetpat accessories | PM-TK-01

meetpat Tall Extension Kit is compatible with permanent and semi-portable Bottle Refill Stations.

The kit is manufactured using powdercoated aluminium featuring polycarbonate graphics panels with antigraffiti protection.

OVERVIEW | TALL EXTENSION KIT | PARTS SUPPLIED

The Tall Extension Kit is not a stand alone product and must be installed to a permanent or semi-portable meetpat bottle refill station.

- A** **4mm Backing Panels**
(Ground mount x2) (Wall mount x1)
- B** **2mm Graphics Panels**
(Ground mount x2) (Wall mount x1)

Set up guidelines

We designed meetpat's advanced modular system to make drinking water accessible for everyone.

We are proud to supply world leading bottle refill stations, for long term, large scale events. Simple to set up with a heavy duty base and ramp system, for stand alone or interconnect multiple units additional filling points.

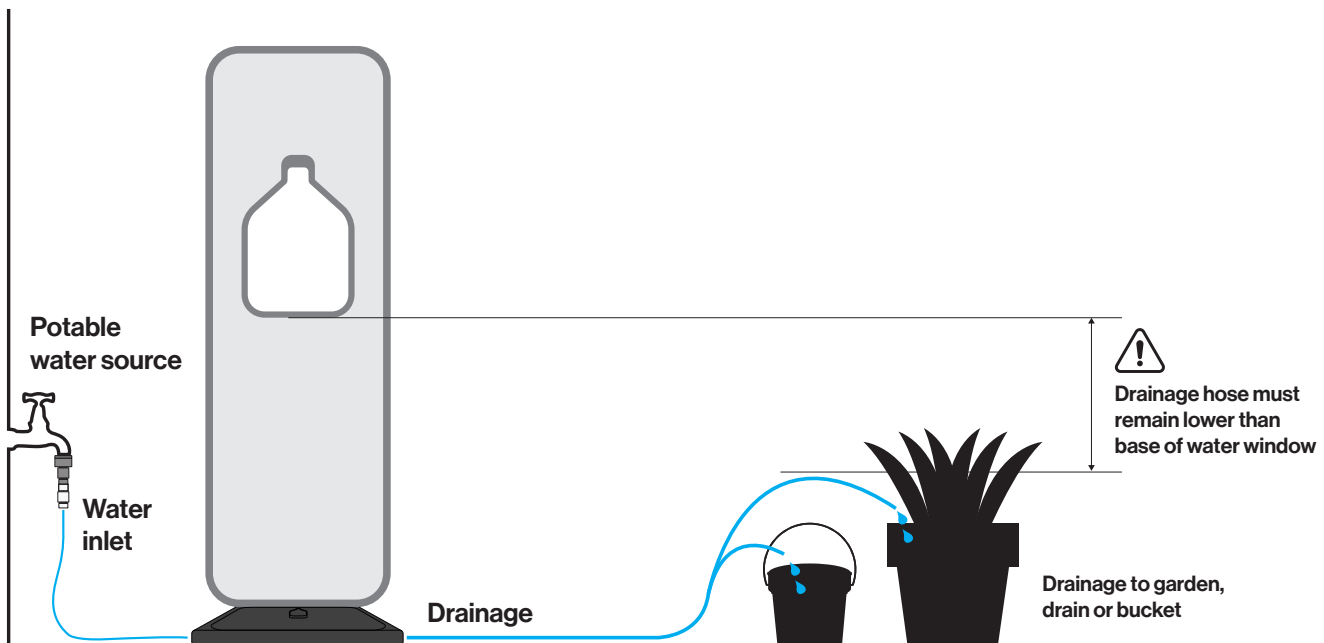

While the product itself is important, inclusivity also flows through to the set up. The water station location and accessibility will ensure maximum user engagement. In these guidelines we have outlines what is required to ensure your set up follows the same high quality of the water station.

SET UP GUIDE | ACCESSIBILITY & SAFEGUARDS

CHECK	SAFEGUARDS
	Check water source/tap for pressure and clean, potable water.
	Assess set up location and surface, traffic clearance, pedestrians and O&S guidelines.
	Do not set up in subzero temperatures. Water stations and hosing exposed to direct sun in extreme temperature environments, may cause water and surface temperatures to become high enough to pose potential risk to users. Do not set up in high wind areas.
	Do not set up units near live exposed electrical connections or wiring.
	Check the hoses, fittings and water station are clean and free from debris, grime, mould or other contaminants prior to connecting.

! IMPORTANT
Eliminate trip hazards by concealing all hoses located on walkways. Use trip cover ramps or similar.

SET UP GUIDE | SEMI PORTABLE SET UP

SET UP GUIDE | SEMI PORTABLE SET UP

5

If connecting multiple water stations - use joiner hoses (purchased separately) to connect the units.

6

Connect the drainage hose.

7

Turn on water supply.

Activate the refill sensors to flush out any air bubbles and old water in the lines.

Run for 10 seconds | **Check for leaks.**

IF A LEAK IS FOUND, TURN OFF THE WATER SUPPLY AND CHECK ALL CONNECTIONS.

SET UP GUIDE | SEMI PORTABLE SET UP

8a Locate the ramps to both side of the unit

8b

Water station | Maintenance & Servicing

Semi Portable Refill Station & Accessories

You have chosen to install a meetpat water station. These world leading water stations are manufactured with premium components and leave the factory carefully checked. To ensure the water station is functioning correctly and in perfect condition.

Please take time to familiarise yourself with our maintenance and servicing procedures ensuring the water station continues to function at the supplied high standard.

Exercising a common sense approach to maintaining your water station is recommended, given the water stations can be installed in numerous locations and varied weather conditions.

MAINTENANCE | OVERVIEW & SCHEDULING

GENERAL (BEFORE AND AFTER EACH USE)	CHECK
A Clean nozzle	
B Clean drainage grate	
C Wipe clean surfaces and graphics panels	
D Check and clean sensor button	
E Check the hoses, fittings and water station are clean and free from debris, prior to connecting	

DETAILED (EVERY 12 MONTHS OR FILTER CAPACITY)	CHECK
All general cleaning tasks, as outlined above	
Replace the filter (if fitted) - Page 28	
Clean the mesh filter - Page 29	
Change the batteries in the sensor tap valve - Page 30	
Remove graphics panels and clean dirt from the frame - Page 27	
Check condition of all hosing and connections. Clean and flush (as required).

TROUBLESHOOTING

1

Identify the Problem

Remove front panel(s) to view the full function of the water station. This will help you correctly identify the fault, damage and/or leak.

2

On-site Repair

Many problems can be easily fixed onsite.

- Removal of dirt/debris.
- Cleaning.
- Sensor battery replacement.
- Reconnect loose fittings.

3

Further Steps

Other problems may require ordering of spare parts or further assistance from meetpat. When phoning through for additional support, staff will ask for the following information to correctly identify the product model/part:

- What is the serial number of the water station?
- Where is the water station located?
- Can you supply a photo/short video of the problem?
- Who purchased the water station?
- Can you supply a photo of the entire water station set up?

4

Contact meetpat

The service/sales team(s) will be able to assist you best in resolving the problem and/or ordering a replacement part.

sales@meetpat.com.au | service@meetpat.com.au | 026021 0300 | +61260210300

Some Common Questions

There is no water (or reduced water) when the sensor is activated?

Check the water is turned on, with adequate pressure and the hosing inside the water station is not bent or kinked. Check the hosing is fitted into the connector correctly and clicked in place. Check the batteries and/or valve are working.

The water is leaking from inside the water station?

Check the drainage hose is correctly plugged in and draining properly. Turn off the water supply and check all the internal pipe connections.

Water is flowing from the connectors or the near base?

Check the stop valve in the connectors is sealing correctly. Insert a hose or joiner hose to reset the seal. Check for any dirt, debris or damage to the fittings or hosing.

Water is leaking from the tap adapter connection at the tap point?

Check the seal is still in the tap adapter. Check you are using the correct tap adapter thread for your connection point.

WARRANTY | MEETPAT POLICY

What is covered by this defects warranty policy?

meetpat warrants that new products purchased either from meetpat direct or through authorised distributors, which are still in the possession of the initial purchaser, will be free from defects for the warranty period, subject to the terms of this policy.

A product may be defective if meetpat finds that it is non-conforming in material or workmanship and if the non-conformance materially impairs the performance of the product having regard to the purpose for which it was designed and the limitations stated below.

General product range.

Permanent Water stations – Three (3) Years

Portable Water stations – One (1) Years

Limited coverage warranty items.

For some special parts or components within a water station, warranty conditions are as below. For the complete limitations list, please see below.

Batteries – One (1) Year

LoRaWAN Electronic Monitoring Equipment – One (1) Year

Water Filters – One (1) Year

Graphic Panels - Three (3) Year Climate Dependant

Limitations.

This warranty will not cover products that:

- a) Include customer-specified materials or finishes that are not part of meetpat's standard product range at the time of manufacture;
- b) Are not installed and maintained as recommended in meetpat's written installation and maintenance guidelines; products are designed to operate within a minimum/maximum supply line pressure as indicated in the supporting instruction books. Any damage caused by reason of connecting a water cooler, bottle filler, fountain or packaged water cooler to supply line pressures outside of the working pressure is not covered by this warranty.
- c) Have not been used in accordance with any applicable usage guidelines;
- d) Have been misused or usage is in excess of normal wear and tear;
- e) Have been damaged for example as a result of collision, theft or vandalism; and/or
- f) Are manufactured by a third-party supplier and then resold by meetpat without incorporating any meetpat manufactured product into the third party product.

Finishes and components on meetpat products are updated periodically to respond to the demands and changing preferences of our customers. As a result we may discontinue some options before expiration of the Applicable Warranty Period and do not guarantee that any replacement product or part will be identical to, or match the finish of, the original.
